Summary

DevOps Engineer with 4 years of experience building and running production Kubernetes platforms on Azure and AWS, with Terraform, GitOps, CI/CD, observability and incident response. AZ-104 and GH-200 certified.

Technical Skills

Cloud: Azure (AKS, VMs, SQL Server, Key Vault), AWS (EKS, ECS, EC2, EventBridge, Bedrock), GCP (GKE)
Containers & Orchestration: Kubernetes, Docker, Helm, Flux, GitOps
IaC & CI/CD: Terraform, Ansible, GitHub Actions, Azure DevOps, HashiCorp Vault, Git
Observability: Prometheus, Grafana, OpenTelemetry, Loki, Alertmanager, Elastic Stack (ELK)
Languages & Data: Python, Bash, SQL, Linux, Kafka
ML & AI: scikit-learn, MLflow, vLLM, Ollama, RAG, Amazon Bedrock

Experience

EG A/S Aug 2023 – Oct 2026
DevOps Engineer *Mangalore, India*

- Built and operated a multi-tenant, highly available **AKS (Kubernetes)** platform for Estata, a rental management product: 8 nodes, ∼**60 .NET microservices** on Kafka, meeting a **99% monthly uptime SLA**.
- Shipped continuously through **GitOps (Flux, Helm)** with rolling updates; built CI/CD with **GitHub Actions** and Azure DevOps, cutting build time from **30 to 5 minutes** by sharding jobs.
- Provisioned MainManager's Azure environments (virtual machines, SQL Server) with reusable **Terraform** modules and secrets in HashiCorp Vault.
- Built observability with **OpenTelemetry, Prometheus, Grafana and Loki**, alerting to Teams via Alertmanager; handled **incident response** and postmortems, with Claude agents for root cause analysis.
- Designed and ran **MestroBot** in production, a pipeline (Scrapy, Elastic Stack) collecting several GB/day of energy readings from ∼140 companies, and built ML models on its data: an **Isolation Forest** for anomaly detection, an imputation model for missing readings and **gradient boosting** to predict consumption.
- In the AI CoE team, built RAG chatbots on **Amazon Bedrock** (AWS ECS) and served open models with **vLLM**; cut AWS spend by **$4,000+/month** by right-sizing dev clusters and shutting down idle inference machines with EventBridge.

Aphelion Labs Feb 2023 – Jul 2023
Python Engineer *Indore, India (Remote)*

- Built the backend of Woodle AI, an AI website builder: **Python microservices** on OpenAI GPT APIs.
- Ran its infrastructure: **Docker** containers on **AWS (ECS, EKS)**, deployed through GitHub Actions CI/CD.
- Built REST APIs (Swagger/OpenAPI) for a financial services backend.

Glowtouch Technologies Aug 2022 – Jan 2023
Graduate Engineer Trainee *Mangalore, India*

- Maintained and hardened on-premises **Linux** servers for domain-hosting platforms (firewalls, fail2ban, systemd).
- Built **GitHub Actions** pipelines to deploy across environments.
- Wrote **Python and Bash** services and automation for the domain-hosting backend.

Projects

Low-Latency Trading Infrastructure | *Terraform, AWS, Prometheus, Grafana, Loki* | GitHub

- Terraform-provisioned AWS host, placed by per-AZ latency tests and tuned at kernel and network level (CPU pinning, TCP), reaching 1–3 ms order fills, with Prometheus, Grafana and Loki monitoring p50/p95/p99 latency.

AI Market Research Platform | *Python, AI agents, DuckDB, LanceDB, Neo4j* | lumen.tradehook.click

- Self-hosted on a dedicated Hetzner server with Prometheus and Grafana: scans ∼4,500 stocks over 4.5M+ data points, with Hermes-orchestrated AI agents (MiniMax model) researching earnings calls and SEC filings.

GKE SRE Platform | *GCP, Terraform, Ansible, Helm, Vault* | GitHub

- Regional GKE cluster built with Terraform and Ansible: Prometheus, Grafana, Alertmanager, Vault, Rook-Ceph.

Education & Certifications

B.E. Electronics and Communication, AJ Institute of Engineering and Technology 2018 – 2022
Certifications: Microsoft Azure Administrator Associate (AZ-104), GitHub Actions (GH-200)
